Rinehart Wealth Management

Fourth Quarter 2011 Economic Overview

Daniele M. Donahoe CFA, Chief Investment Officer Mary C. Rinehart CFP®, CEO & Portfolio Manager Treven L. Ayers CFS, CFP®, Portfolio Manager Michael Elliott Van Ness, Senior Research Associate

Everything discussed in this webinar represents the opinions of Rinehart Wealth Management, and should not be construed as a suggestion to buy or sell any specific investment.

Please consult a financial professional before making any investment decisions to ensure they are appropriate for your particular financial and personal circumstances.

Rinehart Wealth Management Greater Trust

Positive Indications

• Baby Boomers need for Income will Drive **Demand for Yield**

Overweight Large Cap, High-Yield, and Munis

- ✓ Screen for companies likely to grow dividends
- ✓ Look for low payout rates

Constructive Employment Data

- ✓ Lower unemployment suggests economic recovery
- ✓ Expiration of 2011 Tax Break to write-off 100% of investments could lead business to spend more on hiring in 2012

Overweight High-Quality **Defensive Sectors**

• Dividend Growth should continue

✓ Payout rates are low at under 30% versus average of 53% (Source: Barron's)

Overweight Companies likely to Increase Dividends

Housing Data is Improving

✓ Both commercial and residential Construction are showing signs of potential improvement

Equal Weigh Domestic and International Equities

✓ Equities will do well if unemployment improves due to a pick up in construction jobs

Negative Indications

• Interest Rates are Abnormally Low

✓ Short-term, high-quality debt instruments appear overvalued

✓ Expectation that rates will move higher eventually

Political Gridlock Hampering Fiscal Policy

✓ Monetary Policy appears increasingly less effective

✓ High-quality tends to outperform in times of uncertainty

• 61% of Active Managers Underperformed their Benchmark

Utilize more ETFs vs Mutual Funds in Large Cap & Mid Cap

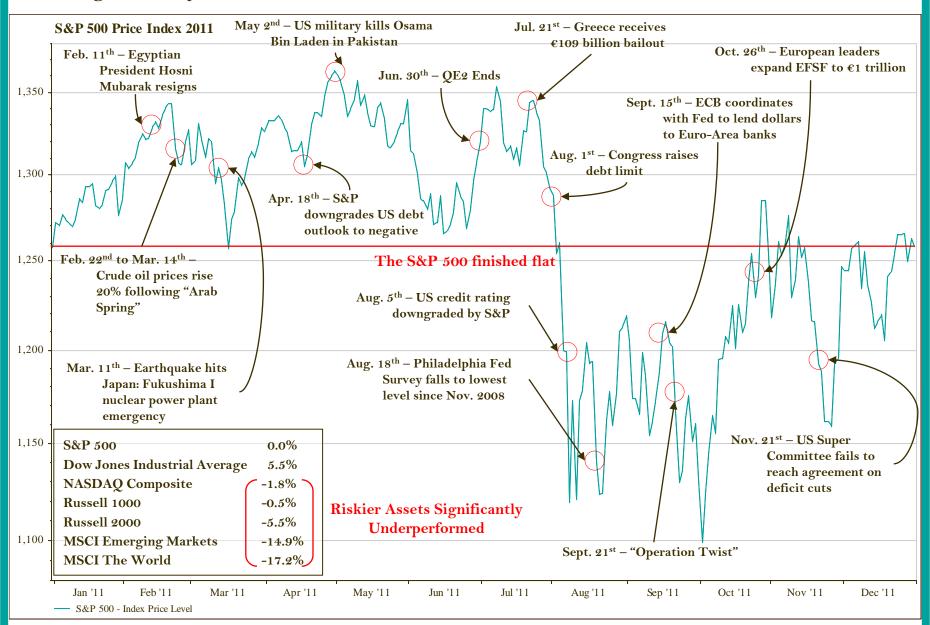

• High Debt Levels are a Secular Headwind

✓ Government benefits are still a high percentage of personal income

Underweight Risky Assets

✓ Hyper-cyclicals, low-quality, highly-levered and high-beta

Moving to Neutral

Conflicting Market Signals

Asset Class	Investment (<u> Opinion</u>

Cash Underweight: We recommend a small cash balance for distributions, fees, and opportunistic buying. Cash yields are negligible, we recommend keeping cash at a low level.

Neutral: We recommend a core weighting in Fixed Income to dampen volatility; however, we are underweight Treasuries. Yields are unsustainably low and should creep up if inflation manifests. Right now, inflation is contained. As bond yields creep up, bond portfolios will suffer. To help combat bond portfolio erosion, we recommend actively managed products, international bond exposure, municipal bonds, and intermediate-term bonds. Although a rate hike is not on the near-term horizon, longer-term rates should move up.

Overweight: We believe that exposure to these alternative asset classes can accentuate return, reduce risk, and mitigate volatility. Our Hybrid category contains hedge funds, utilities, real estate, and hard assets; these asset classes perform differently than a core portfolio allocation. Overweight Hybrids in an attempt to hedge inflation while controlling volatility and offset portfolio exposure to interest rate fluctuations.

Neutral: Within Domestic Equity, we are overweight Large Cap stocks with the potential to increase dividend payouts. Equity valuations are very attractive and equities are under-owned. We are cautious of the sudden run up so far this year but feel valuations are attractive relative to Treasuries.

Neutral: Superior growth and continued financing of the developed world's debt should result in the Emerging Markets category capturing a larger piece of the world index. The Emerging Market asset class has sold off dramatically. Given the solid balance sheets, attractive valuations, and superior growth, Emerging Markets should recover. We currently suggest 30-40% of a portfolio's international exposure be dedicated to Emerging Markets. We like certain high-quality Japanese equities.

Slow & Steady

US Equities Proved Resilient in 2011

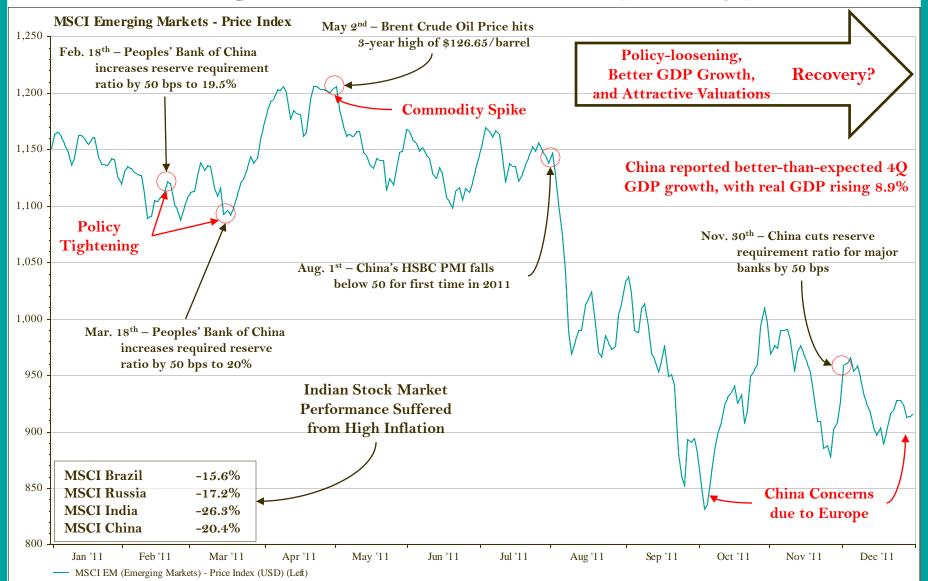

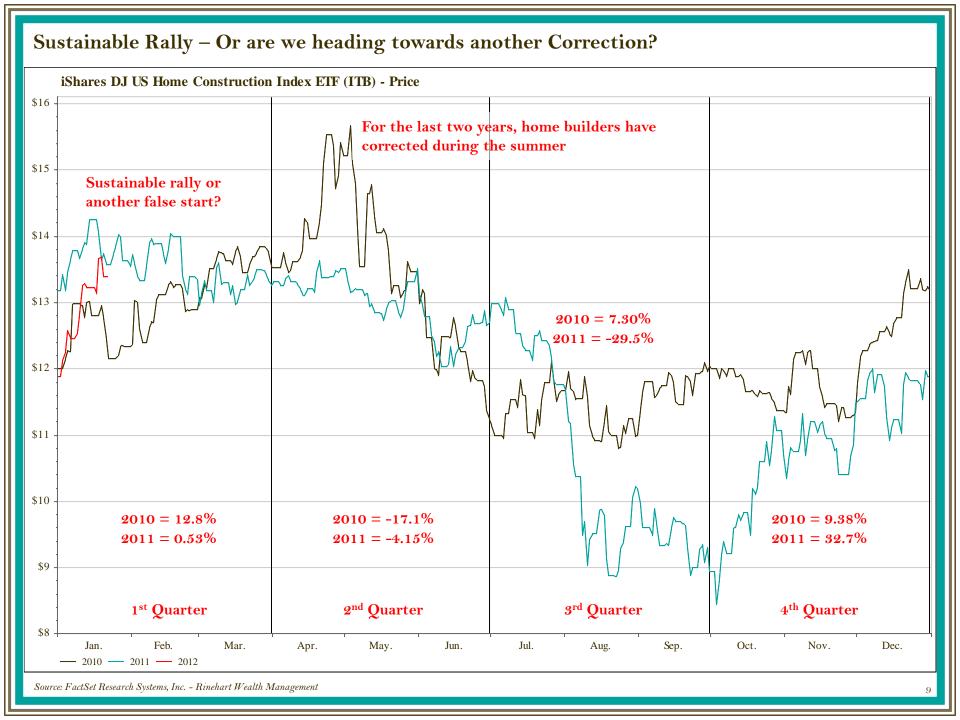

- China underperformed Germany and the other Emerging Markets
- Concerns over exports to Europe, as well as high inflation and policy tightening caused Emerging Market underperformance
- China's PMI fell recently relative to the United States
- US Manufacturing picked up towards the end of 2011

MSCI Emerging Markets Underperformed MSCI US by 20%

• MSCI EM Price-to-Earnings is now 10.5x, its lowest level since March 2009 (Source: J.P. Morgan)

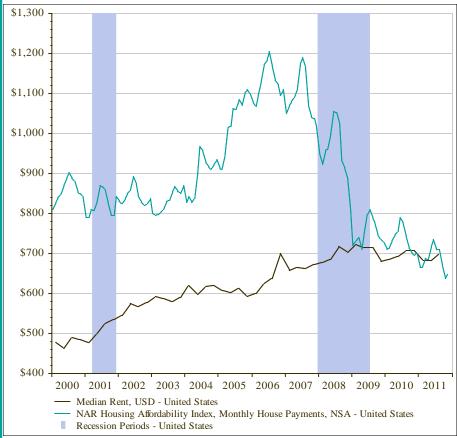

Conditions in Place for Construction Rebound

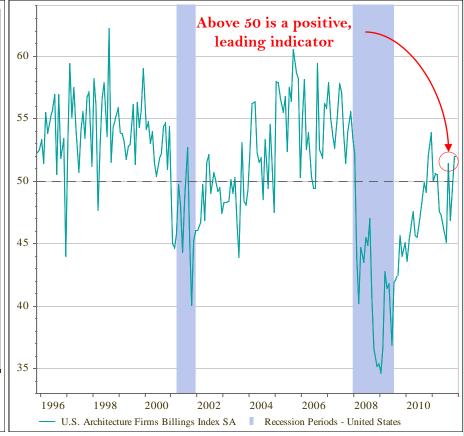

Residential

• Home Ownership appears more attractive than renting for the first time in a long time

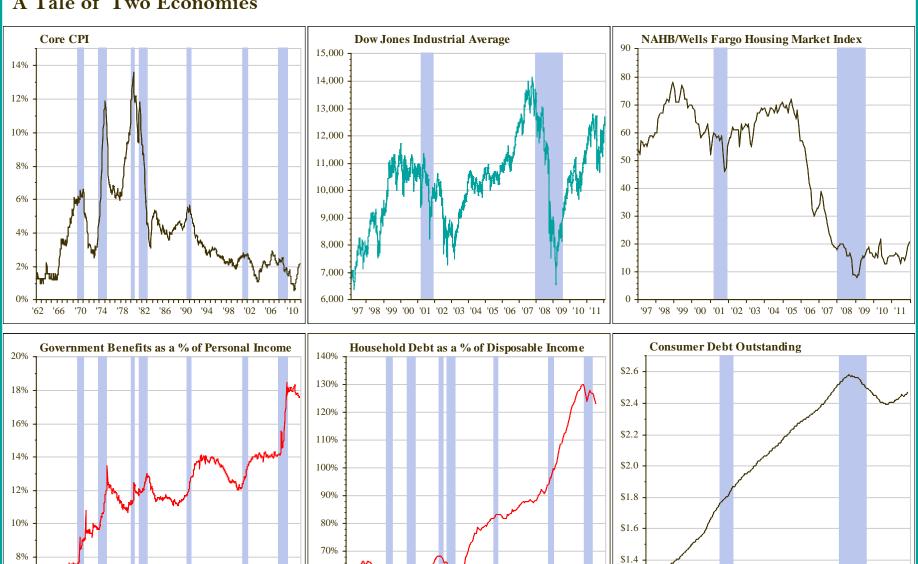

Commercial

• Recent spike in the Architecture Billings Index (ABI) could suggest an improved outlook for commercial real estate
